Agenda

1. Operational Challenges Faced By Businesses
2. Overview Of Cloud Hosting And How It Tackles Business Challenges
3. Why Is ACE Better Than Other Competitors?
4. Ace And NumberCruncher - How They Can Help You?

Challenges Businesses Face

Security issues

It is very likely to encounter data theft and cyber threats when it is stored in local servers.

Inability to access data remotely

When data is stored in a physical computer, it cannot be accessed remotely.

Real-time collaboration

Documents cannot be kept handy and accessed anytime and anywhere.

Extra costs

Extra costs are involved in purchasing and maintaining the on-premise hardware.

What is Cloud Hosting?

Cloud hosting is a type of service, where the customers can host their desktop applications on the cloud environment of a third-party provider.

Unlike traditional hosting, with cloud hosting, one can scale up and down the resources according to the business demand.

Easy Collaboration with clients

- Enables accounting professionals to collaborate efficiently with clients and team in real-time, no matter where they are located
- CPAs and clients can work on the same file simultaneously.

Reduced Costs

- No need to purchase expensive hardware for your office
- No need for a large office space or additional power requirements to run the systems
- No need for a dedicate IT team in the office

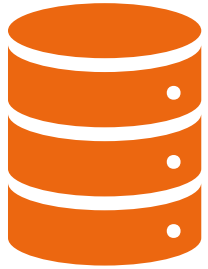
Secure Accounting Operations

- Multiple security layers -firewalls, data encryption, multi-factor authentication, and DDoS protection
- Identity & Access Management so that only authorized users have access to applications and data
- 24/7 CCTV surveillance and on-staff security in data centers



Backup

- Off-site backup available under multiple layers of security
- No need to purchase a local backup server
- Backup taken automatically on a regular basis
- Easy data recovery from any device

Accessibility/Mobility

- Real-time access to any data from anywhere across the globe and from any device like smartphones, tablets, and desktop
- Never miss on essential updates from clients even from a distant location. Always keep projects handy

Disaster Recovery

- No data loss even at the time of disaster
- Multiple backups at distant data centers with high-level redundancy.
- Easy and swift restoration of data from backups
